HWK 1

Data Science Practicum

DATA 793

Exercise 1 (10 points) Use your favorite software and write your code on a local machine. Make sure that you save your output so you can later access it. Test your code on your machine and make sure that you indeed receive the desirable output. Add code needed to run in batch (for instance .lsf) and submit your job.

For your first assignment all you have to do is to submit on Canvas the output that you receive from Zorro, your code, your .lsf file, and an .out file.
